# Student Research Training Program

[globalhealth.duke.edu/dghi-fieldwork](http://globalhealth.duke.edu/dghi-fieldwork)  
GLOBAL HEALTH LEADERS START HERE

Work with Duke faculty and community partners worldwide to begin your global health journey.

North Carolina

Costa Rica

With project locations in Africa, Asia, Latin America and the United States, you will have the opportunity to work on global health topics ranging from HIV/AIDS to community development to cancer prevention.

Uganda

Kenya

Tanzania

India

Sri Lanka

## Student Research Training Program

If you are ready to contribute in a tangible way to global health equality, you have come to the right place.

The DGHI Student Research Training Program is an intensive fieldwork program that immerses second- and third-year undergraduate global health students in the development, implementation and assessment of a community-based project.

## Who can apply?

Second- and third- year undergraduate students:

- enrolled in the Global Health Certificate,
- completed global health courses,
- or have previous international or community-based project experience

## How to apply?

1. Choose a project **location** from the list at [globalhealth.duke.edu/dghi-fieldwork](http://globalhealth.duke.edu/dghi-fieldwork)
2. Complete and submit the program **application** online
3. Send a **CV** and a copy of your most recent **transcript** to [gh-fieldwork@duke.edu](mailto:gh-fieldwork@duke.edu)

## How does it work?

Teams of three students per project location will be selected in November. You will begin your journey through a series of workshops to learn the practical skills needed to develop and implement projects with your community partners.

Before departing in June, you will meet regularly with your faculty director, community partners, and global health leaders to ensure you are prepared for your fieldwork project.

Upon your return, you will attend a series of workshops designed to put your experiences into context and share what you learned with the Duke global health community.

## What is global health?

*Global health is a field of study, research and practice that places a priority on achieving equity in health for all people. It involves multiple disciplines within and beyond the health sciences, promotes interdisciplinary collaboration, and emphasizes transnational health issues and determinants.*

At DGHI, we focus our global health efforts on reducing health disparities — situations in which some populations are more vulnerable to poor health than others. These health disparities are highly prevalent in low- and middle-income countries, but also exist within developed nations and in our own communities.
