The NIH cultural framework for health is intended to guide health researchers in defining, operationalizing and measuring the often nebulous construct of “culture.” The processual framework provides guidelines that aim to improve validity and reliability of research and ultimately to improve intervention outcomes, by attending to cultural processes. Dr. Kohrt will introduce the NIH cultural framework for health and will describe how the framework can be used to improve grant-writing and strengthen research design.

This talk is the first in a Global Health Humanities seminar series sponsored by Duke Global Health Institute.

Light lunch will be served.
